Campaigns

Create, schedule, and send email campaigns to your subscribers. Track opens, clicks, and performance in one place.

Key Features

- **Dashboard Stats:** See total campaigns, how many were sent this month, your average open rate, and how many are scheduled at a glance.
- **Campaign Types:** Organize campaigns by type — Newsletter, Announcement, Welcome Series, Promotion, or Transactional.
- **Flexible Recipients:** Send to all active subscribers, specific subscriber lists, or filter by tags. Recipient counts update live as you change your selection.
- **Personalization:** Insert merge tags — `{{first_name}}`, `{{last_name}}`, `{{email}}`, `{{company}}`, `{{unsubscribe_link}}`, and `{{view_browser_link}}` — into subject lines and content. Use the **Merge Tags** button in the editor toolbar to insert them quickly.
- **Multi-channel Delivery:** Send via email, SMS, or both. SMS messages include a link to the full email and support personalization tags (up to 300 characters).
- **AI Newsletter Generator:** Describe your topic, pick a tone and length, and let AI draft a complete newsletter — including subject line, preview text, and formatted content. Review and edit everything before applying. Uses 10 credits per generation.
- **Email Templates:** Start from a built-in layout — Basic Newsletter, Announcement, or Welcome Email — via the **Templates** button in the editor toolbar.
- **Media Assets:** Upload and insert images or videos from your media library directly into the email editor. Edit titles, descriptions, and metadata from within the campaign editor.
- **Content Tabs:** Switch between the visual HTML editor, plain text version, raw source code, and preview — all in one place.
- **Preview Modes:** Preview your campaign in desktop or mobile view before sending.
- **Test Emails:** Send a test to one or more comma-separated addresses to review the email in a real inbox.
- **Performance Stats:** After sending, view opens, clicks, bounce rate, top-clicked links, delivery timeline, and geographic engagement for each campaign.

How to Use

Create a Campaign

1. Click **Create Campaign** in the top right.
2. Select a site, enter a campaign name, and choose the type.
3. Write your subject line — use `{{first_name}}` to personalize it.
4. Optionally add preview text (the short line shown after the subject in email clients).
5. Choose a delivery channel: Email, SMS, or both.
6. Select your recipients: all subscribers, specific lists, or by tags.
7. Write your content in the HTML editor. Use **AI Newsletter** to generate content automatically, or **Media Assets** to insert images or videos.
8. Check the **Preview** tab to see how it looks on desktop and mobile.
9. Send a test email to review it in your inbox.
10. Choose to **Send Immediately**, **Schedule for Later**, or **Save as Draft**.
11. Click **Save Campaign**.

Use the AI Newsletter Generator

1. Click **AI Newsletter** in the editor toolbar.
2. Describe what your newsletter is about.
3. Optionally add keywords, then choose a tone (Professional, Casual, Creative, Funny, or Persuasive) and length.
4. Click **Generate Newsletter** — generation takes 15–30 seconds.
5. Review and edit the generated subject line, campaign name, and preview text.
6. Click **Apply All & Close** to fill in the campaign form, or **Regenerate** to try again.

Send or Schedule a Campaign

- Campaigns in **Draft** or **Scheduled** status can be edited or sent.
- Click **Send** on any draft to open a confirmation — review the recipient count, check the confirmation box, and click **Send Campaign**.
- Active campaigns can be **paused** and resumed later.
- To reschedule, edit the campaign and update the scheduled date and time.

View Campaign Stats

- After a campaign is sent, click **Stats** to view open rates, click rates, bounce rate, top-clicked links, delivery timeline, and geographic engagement.

Manage Campaigns

- Use the **search bar** to find campaigns by name or subject.
- Filter by site, status, type, or date range using the filter dropdowns.
- Select multiple campaigns to **Duplicate** or **Delete** them in bulk.

Tips

- Save early as a draft while you work — you can always come back to edit before sending.
- Always send a test email before sending to your full list.
- Use the AI Newsletter Generator when you need a quick starting point — you can edit all generated details before applying.
- Preview text significantly affects open rates — always fill it in.
- SMS delivery requires subscribers to have a phone number on file.
